CORE BOX

ADVANTAGES

- 100% wax-impregnated, most other are only 33% wax-impregnated, holds up in trucks
- Core sample boxes for B, N, H and P
- Most durable corrugated box in the industry!
- Competitively priced against all corrugated boxes!
- We can customize a program for your needs
- Wax impregnated box that is 99% impervious to water
- Box holds 10 feet of core samples (P box holds 4 feet)
- Preprinted boxes that you can write on with permanent marker, will not rub off!
- Top, bottom, and insert are perforated together and folded for easy access (H box insert is separate)
- **100% satisfaction guarantee on our products!**

Minex Core Box

There are core boxes and then there are 100% wax-impregnated Minex Core Boxes. The difference is huge!

There are six sides to a corrugated box wall. A typical wax-impregnated box has wax on only two sides, the very inside and the very outside. That leaves four sides of the sheeting unprotected from moisture. Our 100% wax-impregnated box has wax on all six sides for complete protection making the Minex Core Box the superior choice for core storage and protection.

Moisture cannot penetrate the corrugated sheeting on our boxes due to our waxing process. We have conducted studies showing the integrity of Minex Core Boxes is substantially better than the standard corrugated wax core box. Our core boxes are virtually impervious to rain, snow, and humidity.

Another very important factor is our boxes accept writing with a permanent marker perfectly with no smearing. Your old personnel will request our core boxes once they have the opportunity to try them.
